This is a free print-and-play demo game.

- Print out the tiles on this page and the next page on thick paper, or glue the printouts to cardboard and cut them out carefully.
- You will need different-colored pieces. Each player needs 5 pieces of the same color. The original game contains these little wooden pawns which we call “meeples”.
- You can also create a scoreboard (page 4) on which you can display the points during the game. To use this scoreboard, you will need another character in each player color. You can also record your scores on paper.
- This demo game has fewer (48 instead of 72) and smaller tiles. It is also played with fewer meeples (5 instead of 7) than the original Carcassonne. The rules are otherwise the same, and are found on the following pages of this PDF.
- In the basic game there are also rules for advanced players and 2 mini-expansions included. If you are curious, please visit the Z-Man Games website at zmangames.com to find more information about Carcassonne and other great games!
Carcassonne, the world-famous French city, known for its imposing fortifications erected during the Antiquity and the Middle Ages. This fortress, surrounded by magnificent walls, still stands today as one of the most unique French cities. In this game, players must develop the area around Carcassonne. They will place their followers onto roads and into cities, monasteries, and fields. Only those who make the most judicious placements will gain the points required to win the game.

CONTENTS AND SETUP

Welcome to the Carcassonne universe! This rule book was conceived to allow you to learn to play the game as fast as possible. After reading it, you will be able to explain and play the game. You are going to take your first step into the universe of the modern classic that is Carcassonne.

To begin, we need to set up the game, something that only takes a few brief moments. We will also take this opportunity to present the components:

The first and most important part of Carcassonne are the **LAND TILES**: there are 48 tiles which depict roads, cities, and monasteries, all of which are generally surrounded by fields.

Every tile shares the same back with the exception of the **start tile** which you should mark on the back making it easy to set it aside.

Place the start tile, the one you marked in the middle of the table. Shuffle the remaining tiles and set them as different facedown stacks that are easily accessible to all players.

Then comes the scoreboard, which you set to the side of your playing surface.

Finally, we have the meeples.

For this game, you need 5 pieces of the same color for each player.

You will also need 1 additional piece for each player, which you place on space 0 of the scoreboard.
GAMEPLAY

A game of Carcassonne is played in clockwise order. Starting with the first player, the current player does the following actions in the order listed below, after which it is the next player’s turn, and so on and so forth. First, we’ll give you a brief description of the actions you have to do during one of your turns. These actions will be detailed as we present the roads, the cities, and finally the monasteries. So what are these actions?

Placing a tile:
The player must draw exactly 1 Land tile from a stack and place it faceup to continue the landscape.

Placing a meeple:
The player may place a meeple from her supply onto the tile she just placed.

Scoring a feature:
The player must score any feature completed by her tile placement.

The roads

1. Placing a tile
You draw the depicted tile with three road segments starting from a village. You must place it in such a way that it continues the existing landscape (the tiles already in play).

2. Placing a meeple as a highwayman
After placing the tile, you may place a meeple as a highwayman on one of that tile’s road segments, but only if the road is unoccupied by another highwayman.
In our example, since the road is not yet completed, no scoring occurs (see action 3) and play moves on to the next player.
The other player draws a tile that he places to continue the landscape. He may not place a meeple on the road to the right since your highwayman is already present on that road. Instead, he chooses to place his meeple as a knight in the city segment of that tile.

3. Scoring a road
When both ends of a road are closed, that road is completed and scored. The end of a road is closed when it meets a village, a city, a monastery, or it loops onto itself by meeting the other end. So let’s see if there is a scoring here... Huzzah! There is one because both ends of the road are closed.
Even though it is your opponent that placed the tile, this still completes your road. How many points do you score? When scoring a road, each tile of that road grants you 1 point. Here, since you scored a road that is made out of 3 tiles, you score 3 points. Well done!
That's it! We've already seen the most important parts of the game. Now, we will further expand on those actions by showing you how they apply to the other features, namely the cities and the monasteries:

### The cities

1. **Placing a tile**

   As usual, you draw a tile that you use to continue the landscape. Of course, the illustration must be continued as well. For example, a city segment must be connected to an open city.

2. **Placing a meeple as a knight**

   Then, you see if there is already a meeple as a knight in the city. Here, there isn't, so you can place one of your meeples as a knight in this city.

3. **Scoring a city**

   Let’s continue our example and assume that a few turns have passed. You now draw this tile that you place to continue your city. Since the tile you’ve placed completes a feature (here, the city), it must now be scored. A city is completed when it is surrounded by walls and there are no gaps inside the city. Since you have a meeple in the completed city, you are the player to score it.

   Each tile in a completed city is worth 2 points. In addition, each coat of arms is worth 2 more points. For this city, you score 8 points! As usual, the meeple that was in the scored feature returns to your supply.

### The monasteries

1. **Placing a tile**

   Once more, you draw a tile to continue the landscape. Monasteries are always depicted in the center of a tile. When placing such a tile, you must, as usual, make sure that it continues the illustration.

2. **Placing a meeple as a monk**

   You can place a meeple on a monastery as a monk. Of course, that meeple must come from your supply.

   A monastery is always in the middle of a tile. You may place this tile here because the monastery on it is surrounded by fields.
3. Scoring a monastery

A monastery is completed when it is surrounded by tiles. During scoring, the monastery is worth **1 point** per tile that completes it (including the monastery itself).

Perfect! By placing this tile, you complete your monastery. It earns you 9 points and allows you to **take your meeples back**.

And voilà! We have already seen most of the rules for *Carcassonne*. There are only a few points left to see, but first, here is a summary of what we’ve seen so far:

### Summary

1. **Placing a tile**
   - You must place your drawn tile in such a way that it continues the landscape and the illustration.
   - In some very rare cases, it may be impossible to place the tile. In those cases, simply return the tile to the box and draw a new one.

2. **Placing a meeples**
   - You may place a meeples on the tile you’ve just placed.
   - You may not place a meeples in a feature where there already is at least one other meeples.

3. **Scoring a feature**
   - A road is completed when both ends lead to a village, a city, a monastery, or the road forms a loop. Each tile in a completed road is worth **1 point**.
   - A city is completed when it is surrounded by walls and there are no holes inside the city. Each tile in the completed city is worth **2 points**. Each coat of arms in the completed city is worth an extra **2 points**.
   - A monastery is completed when it is surrounded by 8 tiles. Each of the monastery’s tiles (the 8 surrounding tiles and the one with the monastery itself) is worth **1 point**.
   - Scoring always occurs at the end of a player’s turn. At that moment, each player with a meeples in a scored feature earns points.
   - After each scoring, return to your supply the scored meeples.
   - If there are multiple meeples in a single scored feature, the player with the most meeples is awarded full points and all other players receive nothing. When more than one player have the most meeples in a scored feature, the tied players all score full points.

   *(Note: How can there be more than one meeples in the same feature? More on that right below...)*

### Many meeples in the same feature

*The tile you’ve just drawn could continue the road. However, there already is a highwayman on that road, which means that you may not place yours. You decide to place your tile, and a highwayman, so that it is not connected.*

*During a following turn, you draw this tile and decide to continue the road with it. Both roads, each with a highwayman, are now connected. Since this completes the road, it is now scored and both you and the other player score 4 points. Then, you both take your meeples back.*
GAME END AND FINAL SCORING

Sadly, all good things must come to an end, and the same goes for a game of Carcassonne. You may wish that it were otherwise, but there must be a winner! Thus, the game ends immediately after the turn of the player who placed the last tile. Then, players proceed to a final scoring, after which the winner will be known to all!

Once the game is over, all meeples still in play are scored:

- Each incomplete road is worth 1 point per tile, just like during the game
- Each incomplete city is worth 1 point per tile and 1 point per coat of arms, which is only half the points.
- Each incomplete monastery is worth 1 point plus 1 point per adjacent tile, just like during the game.

Once the final score is known, the winner is the player with the most points. Congratulations on winning your first game of Carcassonne!

We’d also like to take this opportunity to thank you for playing Carcassonne and we hope that you will find many hours of enjoyment with this game. If you have any questions, do not hesitate to contact us at the address listed below.
